PRODUCT PORTFOLIO · 2026

Manyata Manocha

AI Product Manager

I find a narrow problem, talk to the people who have it, write the PRD, build the product with AI tools, and measure it honestly. My background is fraud investigation and risk at PwC, and retail banking at ICICI and HDFC.

AI voice mock interviews for PMs

05 **Hamsty**
Voucher wallet with AI reading

06 **AI Teammates**
Paytm Build for India AI Hackathon

ABOUT ME

From fraud investigation to AI products

At PwC Acceleration Centers I lead workstreams in fraud investigations and risk analytics, and I manage a team of 8. Before that I worked with customers in retail banking, including AML and KYC reviews.

That work trained me to check every claim against evidence. I use the same rule in my PRDs: each finding says how strong its evidence is, and each metric says what it can and cannot prove.

Team of 8

I review and mentor a team of 8 at PwC, and I led 2 long-term client engagements in compliance and forensic investigations.

Top Operator

Certificate of Excellence · Rethink Systems

Given for product thinking, building, ownership, initiative and impact over the 9-week AI Product Management program (Cohort 8).

2nd place

Rethink AI-First Buildathon

Team award for The Shravan's Round: execution, speed and go-to-market thinking in a 10-day build sprint with a live product and real users.

EXPERIENCE

PwC Acceleration Centers — Aug 2023 – now
Experienced Associate, Forensics and Risk · Bengaluru

- Worked with a risk-screening vendor to build a client dashboard; turned client needs into dashboard changes.
- Analysed 40,000+ emails, financial records and bank statements in fraud investigations.
- Led 2 long-term engagements; reviewed and mentored a team of 8.

HDFC Bank — Dec 2019 – Sep 2020
Personal Banker

ICICI Bank — Nov 2016 – Sep 2019
Privilege Banker · AML monitoring, KYC reviews, MI reporting

EDUCATION AND COURSES

AI Product Management, Cohort 8
Rethink Systems · Jul – Sep 2026

PGDM, Finance and Big Data Analytics
FORE School of Management · 2023

B.Com (Honours)
University of Delhi · 2016

Business Data Analytics
National University of Singapore · 2022

HOW I BUILD

Claude Code · Next.js · TypeScript · Supabase · Groq LLM API · Expo · Vercel · Power BI

01 · PRODUCT WORK AT MY JOB

Risk Screening Dashboard

A risk dashboard for a healthcare client of PwC, built with an external risk-screening technology vendor.

WHERE	PwC Acceleration Centers, Bengaluru
CLIENT	Healthcare client (name withheld)
MY ROLE	Experienced Associate: requirements, vendor work, workflow improvements

Global risk and compliance screening

Continuous monitoring of entities

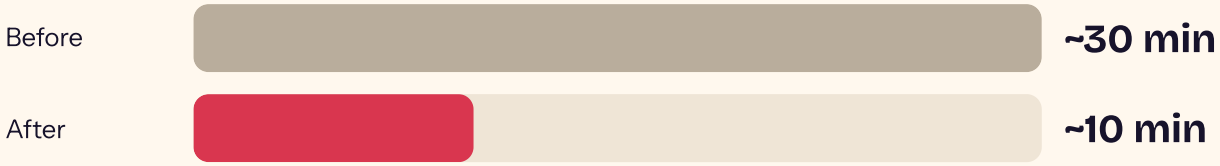

Case creation, data import, tracking and report delivery
The workflow I streamlined

67%
Less time per case, from 30 minutes to 10

30 → 10
Minutes per case, end to end

Up to 25
Cases a week

TIME PER CASE

HOW CLIENT NEEDS BECAME DASHBOARD CHANGES

CLIENT
States what the engagement needs from screening and reports

→

ME
Gathers the requirements and turns them into changes

→

VENDOR
Builds the changes in its risk-screening technology

→

REGULAR CALLS
Client and vendor calls to check and adjust

WHAT I DID

- Gathered business requirements and prioritised workflow improvements
- Aligned client stakeholders with the technology partner
- Gave feedback during release testing and live rollout
- Streamlined case creation, data import, tracking and report delivery

WHY IT MATTERS FOR A PM ROLE

This was a real product with a real client and an external vendor. I sat between the people who needed the product and the people who built it, and the result is measured in time saved per case.

02 · GOVERNMENT AND PUBLIC SECTOR

Adhikaar

Free guidance that helps a family claim the bank deposits of a person who has died, using the RBI's own rules.

TYPE	Individual case study, Rethink Systems
MY ROLE	Research, PRD, design, build, launch
BUILT WITH	Next.js, TypeScript, Supabase, Groq, Vercel
LIVE	adhikaar-gamma.vercel.app

₹17k → ₹1k
Estimated cost, court route against simplified route

7
Interviews across 6 segments

8
Verdict routes, each at a shareable link

53
Automated tests, all passing

THE PROBLEM

Since the RBI Directions of 2025, a bank usually may not demand a succession certificate for a deposit claim. Legal websites and ChatGPT still give the old answer. For a ₹4 lakh account with no nominee, court costs about ₹17,000–37,000 and 5–7 months. The simplified route costs about ₹1,000 and 4–6 weeks.

KEY INSIGHT

The person who releases the money is the **branch officer**. Other guides speak only to the family. Adhikaar gives the family a page for the officer: the RBI paragraph, with its number, beside the bank's own published policy.

HOW I MEASURE IT

- **North Star:** Weekly Resolved Journeys, a count
- **Guardrail:** Honest-Exit Rate, so a rising count cannot hide false confidence
- **Retention:** left out on purpose. A family claims once.

WHAT RESEARCH SHOWED

- Each interview began cold: "₹4 lakh in SBI, no nominee. What would you do?"
- People read "no nominee" as "court".
- Nobody reads RBI circulars, including people who could.
- Trust depends on visible sources.

WHAT I BUILT

- Up to 8 questions, then 1 of 8 verdicts
- Document checklist with issuer, cost and time
- Policy table for 8 banks, old rows flagged
- Print or PDF by email, in 3 languages
- "Ask Saathi" assistant; no login, no stored data

SCOPE I CUT

Insurance, mutual funds, shares, EPF, NPS, property and heir disputes. I could verify every claim about bank deposits in the time available, but not the other seven areas.

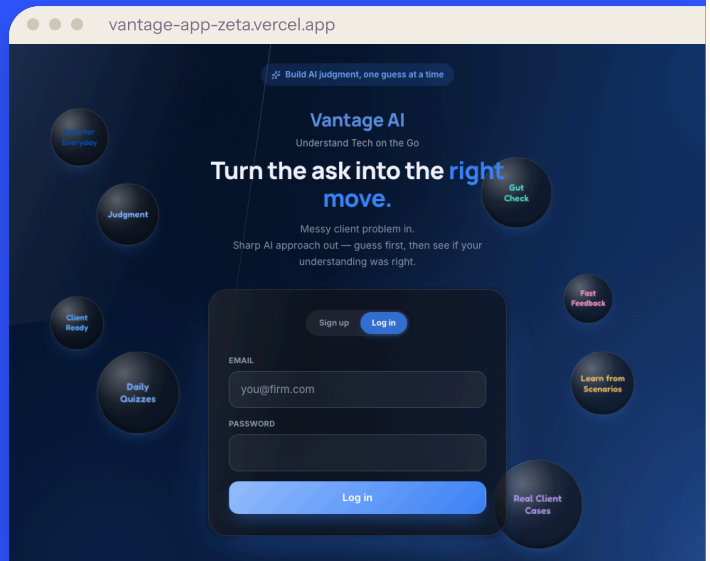

Honest status: the product is live with a public metrics page. Five interview participants used it. The live traffic so far is the team's own testing, so I report no user numbers yet.

03 · LEARNING TECH AND AI

Vantage

An AI learning app that trains client-facing consultants to judge which AI approach fits a client problem.

TYPE	Individual case study, Rethink Systems
MY ROLE	Interviews, PRD, design, build, pilot
BUILT WITH	Next.js, TypeScript, Supabase, Groq, Vercel
LIVE	vantage-app-zeta.vercel.app

88%
Testers who finished a meaningful activity with no help (15 of 17)

9
Interviews across 8 roles

12 / 14
Solutions rated helpful in the pilot

268
Unit tests

THE PROBLEM

Professionals in India use AI every week. They still cannot tell which AI approach fits a new client problem. Their confidence comes from repeating familiar tasks. Courses add more content, and free content is completed by fewer than 5% of learners.

WHY THIS USER

I interviewed across 8 roles before I chose a persona. The client-facing consultant came out on top: the problem comes back every week, a wrong approach reaches a paying client, and "which approach fits" has an answer that can be graded.

WHAT I BUILT

- **Practice:** guess before reveal. The answer shows only after the learner commits, and the reveal explains why each other option loses.
- 90 scenarios, 120 concept questions, difficulty tiers, no repeats
- **Solve:** bring a real client problem, get a step-by-step approach
- **Review gate:** no AI-made question reaches a learner unchecked

WHAT I CUT, AND WHY

- **Share and invite:** no evidence for it, and it conflicts with privacy
- **Streaks and leaderboards:** a learner who is wrong must stay private
- **Payments:** the free version has nothing to protect

HOW I MEASURE IT

- **North Star:** Weekly Engaged Learners, people with 3+ practice sessions in 7 days
- A count, because a ratio can rise while users fall
- **Guardrails:** helpful rate, first-guess accuracy floor, rating coverage

WHAT THE PILOT TAUGHT ME

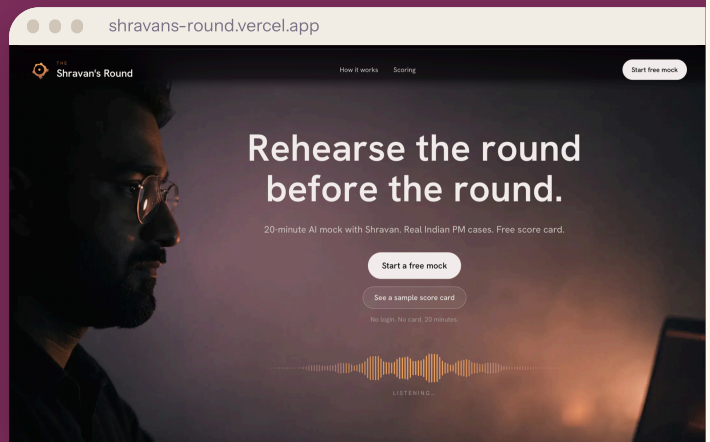

17 external testers used it without an onboarding call. Everyone who started a guess-then-reveal loop finished it. Only 2 of 17 found the scenario quiz, so I changed the navigation. Retention has no data yet.

04 · INTERVIEW PRACTICE

The Shravan's Round

A 20-minute AI voice mock interview for product manager candidates, with real Indian PM cases and a score card at the end.

TYPE	Team project, built with Shravan Tickoo
AWARD	2nd place, Rethink AI-First Buildathon
LIVE	shravans-round.vercel.app

20 min
One mock interview, answered out loud

5
Scores, each out of 5, plus one thing to fix

0
Logins or cards needed to start

4
Indian case sources: Swiggy, Zepto, Flipkart, CRED

WHAT IT DOES

The candidate picks a role, experience level and focus. An AI interviewer in Shravan's style asks questions out loud. Each answer decides the next question, and loose answers get a cross-question. Mixed Hindi and English is accepted and scored on clarity.

HOW A MOCK WORKS

- **Set up:** two choices, no forms
- **Interview:** Shravan asks, the candidate answers out loud
- **Score card:** five scores and the one line that cost the most
- **Transcript:** annotated, with every cross-question saved to practise again

SAMPLE SCORE CARD, FROM THE PRODUCT

Structure	3.5
Product sense	4
Metrics	3
Prioritisation	3.5
Communication	4

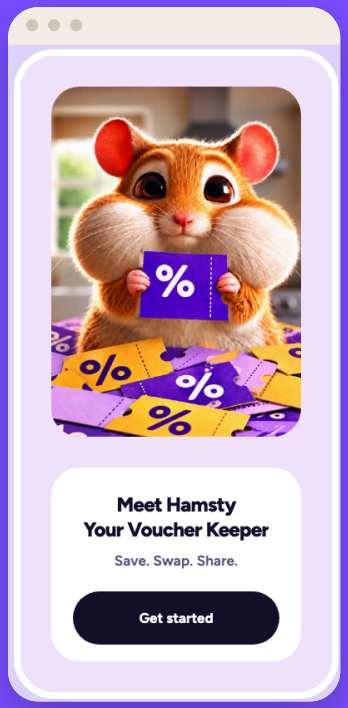

Fix first: state the trade-off before the recommendation.

05 · PERSONAL PRODUCT · IN BUILD

Hamsty

A voucher wallet. It collects vouchers from pictures and Gmail, reminds people before they expire, and lets them give unused ones away.

TYPE	Personal project
MY ROLE	Idea, design decisions, specs, build
BUILT WITH	Expo (React Native), Supabase, Groq, Vercel
DEMO	hamsty.vercel.app (web, test data)

7 · 3 · 1
Days before expiry when reminders go out, plus the last day

1 / day
Most reminders a person gets, bundled

6
Badges for people who give vouchers away

0
Sign-up steps before a person can try it

THE PROBLEM

Vouchers arrive in email and as screenshots. Most are unnamed codes, for example ₹250 off ₹2,500. People forget them until they expire, and they have no easy way to pass on the ones they will not use.

WHAT I BUILT

- **Stash:** all vouchers in one place; the code stays hidden until "Show code"
- **Snap:** AI reads a voucher picture and fills in the details
- **Gmail:** optional link to find voucher emails
- **Share board:** give vouchers away, with a weekly leaderboard
- **Nearby:** alerts near shops on the phone app

DECISIONS I MADE

- **Guest account first.** People try the app before they give an email.
- **Picture reader on Groq.** It is free and keeps no copy by default. I rejected a free tier where the provider may read the content.
- **Privacy policy before launch.** Written alongside the build, shown in the app.

HOW I WORK ON IT

I split the product into parts (wallet, reminders, nearby alerts, sharing). For each part I write a spec, approve it, then build from a step-by-step plan with automated tests. Each part runs on a real Supabase back end with row-level security.

Status: in build. The web demo is live with test data. Phone apps come after the web launch.

06 · HACKATHON · TRACK 3

AI Teammates

Two AI agents for a payments company: one turns a sales lead into a payment, one fixes a failed payment. Both hand off to a person at set limits.

EVENT	Paytm Build for India AI Hackathon, Bengaluru
TEAM	Team Rethinkers: Tushar Pathak, Manyata Manocha, Sundaram Sharma
STAGE	Stage 1 pitch deck, October 2026. Finals on 31 October 2026.
PLANNED STACK	Python, FastAPI, LLM with tool calling, Postgres audit log

Business model: used inside the company to lower cost per case, or sold to merchants as a paid add-on. A small fee is charged per solved case or closed deal.

24.07 bn

UPI payments in September 2026 (NPCI). About 0.8% fail for technical reasons. RBI Ombudsman complaints reached 1.33 mn in FY25, up 13.55%.

THE PROBLEM

Sales teams score each lead by hand, and quotes and payment links go out slowly. Support teams check each failed payment by hand, then refund, retry or escalate it. Both jobs repeat the same three steps: look up, decide, act.

HOW IT DIFFERS FROM A CHATBOT

- **It acts:** sends payment links and triggers reversals
- **It hands off:** large deals and hard cases go to a person
- **It is measured:** each teammate has outcome metrics

HOW A CASE MOVES THROUGH THE SYSTEM

INPUT — Lead or failed payment

→

AI AGENT — LLM with tool calling

→

RULES — Refund cap, deal-size limit. Over the limit: a person gets a case summary

→

TOOLS (MOCK) — Payment link, refund, reversal

→

CUSTOMER — WhatsApp or SMS

THE SAME FIVE STEPS FOR BOTH TEAMMATES

	Understand	Decide	Act	Handoff	Outcome
Sales Teammate	Reads history and lead source	Scores the lead, picks an offer	Sends quote and payment link	Books a human call for large deals	Conversion rate, time to close
Customer Service Teammate	Pulls the failed payment and bank reference	Refund, retry or escalate	Triggers reversal, tells the customer	Escalates with a full case summary	Solved without a person, handle time

FOUR NUMBERS WE WILL TRACK

Sales · goes up
Conversion rate
Share of leads that become paid deals

Sales · goes down
Time to close
First contact to payment link

Service · goes up
Solved alone
Failed payments fixed without a person

Service · goes down
Handle time
Time a person spends on each escalated case
